1. Features

Wi-Fi

- IEEE 802.11b/g/n 1x1 compliant
- Supports 20 MHz channel
- STBC supported
- Operating modes: STA and SoftAP
- Concurrent SoftAP + STA
- TX power up to +19 dBm
- RX sensitivity -99 dBm

Bluetooth Low Energy

- Bluetooth 5.2 Low Energy (LE)
- Supports Bluetooth Low Energy 1 Mbps, 2 Mbps, and long range (125 kbps and 500 kbps)
- Advertising extensions
- Bluetooth direction finding: Angle of Arrival (AoA) and Angle of Departure (AoD)
- Supports an antenna array with up to 16 antennas for precise positioning

Core

- 32-bit MCU at up to 160 MHz
- UART Flash download
- JTAG debug interface

Memory

- 2 MB SiP Flash
- 288 KB RAM
- 4-byte eFuse

Clock Management

- External oscillator: 26 MHz crystal oscillator (XTALH)
- Internal oscillators: 26–160 MHz digitally controlled oscillator (DCO), 32 kHz ring oscillator (ROSC)
- 480 MHz DPLL

Power Management

- 2.7 to 3.6 V VBAT supply
- On-chip Power-On Reset (POR) and Brown-Out Detector (BOD)
- Embedded LDO regulators
- Low power consumption:
 - Active mode RX: 40 mA
 - Low-voltage sleep mode: 90 μA
 - Deep sleep mode: 10 μA
 - Shutdown mode: 0.5 μA

Peripherals

- GPIOs: 19 in QFN32, 9 in QFN20
- 1x SPI
- 2x UART: 1 with Flash download support
- 1x I2C
- 1x general-purpose DMA controller (GDMA) with 6 channels
- 6x 32-bit PWM channel
- 10-bit AUX ADC, up to 6 channels
- 6x general-purpose 32-bit timer
- 1x watchdog timer (WDT)
- 1x real-time counter (RTC)
- 1x temperature sensor
- 1x true random number generator (TRNG)

Packaging

- QFN32 package, 4 x 4 mm
- QFN20 package, 3 x 3 mm
- Operating temperature range: -40 to +105 °C

2. Overview

The BK7238 is a highly-integrated single-chip Wi-Fi 802.11b/g/n and Bluetooth 5.2 Low Energy (LE) combo solution designed for applications that require low power consumption and compact size. The integration of a powerful 32-bit MCU and a comprehensive set of peripherals and interfaces makes the BK7238 ideal for advanced Internet of Things (IoT) applications.

Using advanced design techniques and process technology, the BK7238 delivers high integration and minimal power consumption in extremely small packages for smart lighting, smart home, positioning, and other advanced IoT applications.

Figure 2-1 shows the general block diagram of BK7238.

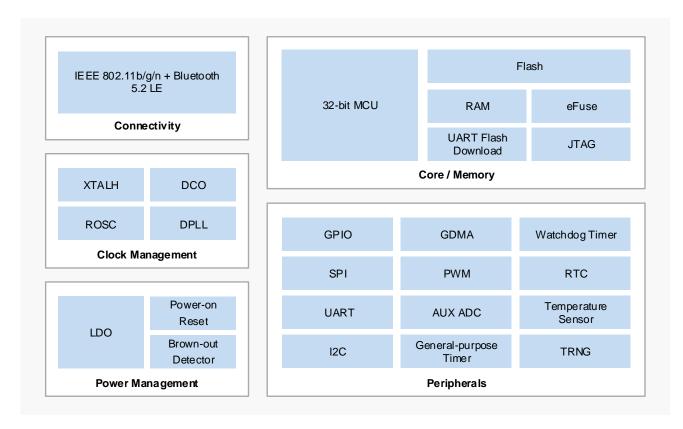

Figure 2-1 BK7238 Block Diagram

The BK7238 devices are offered in several packages. The set of included peripherals varies depending on the package. Table 2-1 shows the list of peripherals available on each part number.

Table 2-1 Device Options and Features

Feature		QFN32	QFN20		
Flash		2 MB	2 MB		
GPIO		19	9

4. Functional Description

4.1 WLAN/Bluetooth Transceiver

The BK7238 integrates a high-performance WLAN/Bluetooth transceiver. On the receive side, the incorporated low noise amplifier (LNA) amplifies the single-ended input and converts the amplified signal into differential outputs to achieve a better noise and linearity trade-off. On the transmit side, the differential outputs to the power amplifier (PA) are combined and converted to a single-ended output via the on-chip balun. This enables transmit and receive operations with only one ANT pin connected to the antenna. The communication range can be extended by configuring GPIO0 and GPIO1 as TXEN and RXEN function to control external PA and LNA. The frequency synthesizer is fully integrated, eliminating the need for any external components.

4.2 Power Management

4.2.1 Power Modes

The BK7238 supports four low-power modes except active mode, namely shutdown mode, deep sleep mode, low-voltage sleep mode, and normal sleep mode, where shutdown mode has the lowest power consumption.

Shutdown Mode: All circuits are powered off. A high level on the CEN pin will take the system to active mode.

Deep Sleep Mode: All circuits are powered off except the always-on (AON) logic. A GPIO interrupt or an RTC interrupt can power up the system again. Retention registers can keep their contents.

Low-voltage Sleep Mode: The MCU and all digital logic stop their clocks, and their power supply decreases to a much lower retention voltage, which results in a much lower current. A GPIO interrupt or an RTC interrupt can bring the system back to active mode with normal voltage.

Normal Sleep Mode: The MCU stops running, and all peripheral interrupts can resume the MCU.

Active Mode: The MCU is active, and all peripherals are available.

4.2.2 Power-up Sequence

Figure 4-1 shows the power-up sequence of BK7238.

Figure 4-1 BK7238 Power-up Sequence

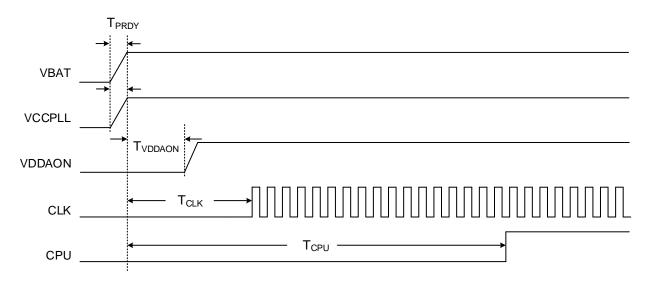

Table 4-1 Timing Parameters of BK7238 Power-up Sequence

Parameter	Description	Min.	Тур.	Max.	Unit
T_{PRDY}	VBAT ready time	-	0.5	1.5	ms
TVDDAON	Always-on/digital LDO output ready time	-	0.5	1.5	ms
T _{CLK}	26 MHz clock stable time	-	3	5	ms
T_{CPU}	Application ready time	60	70	-	ms

4.3 Clock Management

The primary clock sources available in the BK7238 are as follows:

- High-frequency clocks
 - 26 MHz crystal oscillator (XTALH)
 - 26–160 MHz internal digitally controlled oscillator (DCO), about ±2% variation after calibration
 - 480 MHz digital PLL (DPLL)
- Low-frequency clock
 - 32 kHz internal ring oscillator (ROSC), about $\pm 2\%$ variation after calibration

The system generates a low-power clock source LPO_CLK for standby. The LPO_CLK can be selected from the following clocks:

- 32 kHz clock signal derived from 26 MHz crystal oscillator

- 32 kHz internal oscillator ROSC

The clock selection for the MCU and peripherals is listed as follows.

Table 4-2 Clock Selection

MCU and Peripherals	XTALH	DCO	DPLL	LPO_CLK
MCU	V	V	√	√
Flash controller	$\sqrt{}$	√	√	
SPI	√	V		
UART1	√	√		
UART2	√	V		
I2C	√	V		
PWM	√	V		√
AUX ADC	√	V		
TIMG1	√			
TIMG2				\checkmark
Watchdog timer (WDT)				√
Real-time counter (RTC)				V

The BK7238 also has clock output capability to output clock signals to external components. GPIOs can output the following clock signals:

- LPO_CLK: low-power LPO_CLK clock
- CLK26M: high-frequency crystal clock, generally 26 MHz
- CLK13M: clock derived from high-frequency crystal clock (factor 1/2/4/8)

4.4 Reset

A reset can be triggered by the following sources: power-on reset, brown-out reset, watchdog reset, and wake-up from shutdown mode or deep sleep mode.

System power-on reset, digital power-on reset, and watchdog reset have the same reset effect on all blocks, except for the always-on logic. Any of these three resets can reset the whole chip to its initial state. The always-on logic has a 32-bit timer and a 16-bit retention register, which can only be reset to initial values by a system power-on reset.

Wake-up from either shutdown mode or deep sleep mode will power on digital from power-down mode, which triggers the whole system reset procedure.

4.5 General-purpose I/Os (GPIO)

The BK7238 has up to 19 GPIOs, which can be configured as either input or output. Most GPIOs are shared with alternate functions.

The main features of GPIOs include:

- Push-pull
- Internal pull-up/down resistors
- Configurable drive strength
- Alternate function
- Interrupt generation:
 - High or low level
 - Rising or falling edge

4.6 SPI Interface (SPI)

The BK7238 integrates an SPI interface that can operate in master or slave mode. The SPI interface allows a clock frequency up to 30 MHz in master mode and 20 MHz in slave mode.

The SPI interface supports the following features:

- 4-wire or 3-wire full-duplex synchronous communication
- Configurable 8-bit or 16-bit data width
- Programmable clock polarity and phase
- Programmable data order with MSB-first or LSB-first shifting
- Embedded 64-depth RX FIFO and 64-depth TX FIFO with DMA capability

4.7 UART Interfaces (UART)

The BK7238 includes two universal asynchronous receiver/transmitter (UART) interfaces, which support full-duplex, asynchronous serial communication at a baud rate up to 6 Mbps.

The UART interfaces offer the features below:

• Configurable data length (5, 6, 7, or 8 bits)

- Even, odd, or none parity check
- Programmable stop bits (1 or 2 bits)
- Each UART embeds a 128-byte TX FIFO and a 128-byte RX FIFO. FIFO mode is disabled by default and can be
 enabled by software.
- Flash download (UART1)

4.8 I2C Interface (I2C)

I2C is a popular inter-IC interface that requires only two bus lines, the serial data line (SDA) and the serial clock line (SCL). The BK7238 embeds an I2C interface, which can operate in master or slave mode.

The features of the I2C interface are listed below:

- Master and slave modes
- Standard mode (up to 100 kbps)
- Fast mode (up to 400 kbps)
- 7-bit and 10-bit addressing
- Bus idle and SCL low timeout condition detection

4.9 GDMA Controller (GDMA)

The BK7238 has a general-purpose DMA controller (GDMA) with six DMA channels to unload CPU activity. The six channels are shared by peripherals that have DMA capabilities.

The GDMA controller can perform single block transfers and repeated block transfers. Data width for destination and source can be configured as 8 bits (byte), 16 bits (half-word), or 32 bits (word). It allows peripheral to memory, memory to memory, and memory to peripheral data transfers at a high speed.

Peripherals with DMA capabilities on the BK7238 include UART1, UART2, and SPI.

4.10 PWM

The BK7238 has three 32-bit PWM pairs labeled PWM0/1, PWM2/3, and PWM4/5. Each PWM pair consists of two 32-bit up counters driven by an 8-bit programmable prescaler.

Each channel can work independently (arbitrary waveform configuration), or two channels can be paired (waveforms completely opposite, timing aligned).

When any of the six PWM pins, GPIO6, GPIO7, GPIO8, GPIO9, GPIO24, and GPIO26 is configured as PWM output, the output source can be select from any of the six PWM channels.

The PWM features are listed here:

- 32-bit up counter
- The counter increases in one direction and automatically continues counting from 0 when it overflows to the maximum value.
- Fixed PWM base frequency with 8-bit programmable prescaler (factor between 1 and 256)
- Six channels, each supports four modes:
 - PWM mode
 - Timer mode
 - Counter mode
 - Capture mode
- Each channel can be enabled individually, and the mode of each channel can be configured individually.
- Configurable PWM period and duty cycle for each PWM channel
- Capable of continuously counting between two rising edges, two falling edges, or any two edges in Capture mode
- Real-time count value can be read in Timer mode.

4.11 Auxiliary ADC (AUX ADC)

The auxiliary ADC (AUX ADC) is a 10-bit successive approximation analog-to-digital converter. The AUX ADC has multiple external analog input channels and internal dedicated channels. The AUX ADC supports A/D conversion performed in one-shot, software control, or continuous mode.

The AUX ADC has the following features:

- Programmable sample rate from 5 kHz to 1.86 MHz
- 10-bit resolution
- Up to six external analog input channels: ADC1/2/3/4/5/6
- Four internal dedicated channels:
 - VBAT monitoring channel (VBAT/2), connected to ADC0
 - Internal temperature sensor (TEMP), connected to ADC7
 - TSSIO, connected to ADC8
 - Internal debug channel, connected to ADC9
- Conversion modes:

- One-shot mode
- Software control mode
- Continuous mode

4.12 Timer Groups (TIMG)

The BK7238 includes two general-purpose timer groups (TIMG). Each group has three 32-bit timers. Each group consists of three 32-bit counters driven by a 4-bit prescaler.

Each TIMG module has the following features:

- Three timers (Timer0/1/2)
- Three 32-bit up counters
- 4-bit prescaler, factor between 1 and 16
- Capable of reading the real-time value of the counter

4.13 Watchdog Timer (WDT)

The purpose of the watchdog timer is to detect and recover from failures or malfunctions. It triggers a reset on expiry of a specified time period.

The watchdog timer runs on the 32 kHz LPO_CLK clock and has a maximum programmable period of up to 65.536 (2^16/1 kHz) seconds.

4.14 Real-time Counter (RTC)

The real-time counter (RTC) is a 32-bit counter that can be used as a wake-up source to wake up the system from low-voltage sleep or deep sleep mode. The RTC runs on the ROSC, and it can keep running even when the system is in low-voltage sleep or deep sleep mode.

4.15 Temperature Sensor

The BK7238 integrates an on-chip temperature sensor that can measure on-chip temperature over -40 to +125 °C with an accuracy of ± 5 °C. The digital results can be read from the ADC.

Usually, the software initiates the calibration of a specific module based on the temperature value, narrowing the difference in chip performance at different temperatures. The host can also read the on-chip temperature and decide whether to reduce transmit power or suspend operation at high temperatures.

4.16 True Random Number Generator (TRNG)

The random number generator module generates true, nondeterministic random numbers based on thermal noise for the purpose of creating keys, initialization vectors, and nonces needed for cryptographic operations.

5. Electrical Characteristics

5.1 Absolute Maximum Ratings

Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. Exposure to absolute-maximum-rated conditions for prolonged periods may affect the reliability of the device.

Parameter	Description	Min.	Max.	Unit
VBAT	Battery regulator supply voltage	-0.3	3.6	V
P _{RX}	RX input power	-	10	dBm
T _{STR}	Storage temperature range	-55	150	\mathcal{C}

5.2 ESD Ratings

Parameter	Description	Test Condition	Value	Unit
	Electrostatic discharge voltage (human	ANT pin	±2000	V
ESD HBM	550 msd01,, per 11 151 252 1202 20	VCCPA/VCCTX/XI pins	±3000	V
	JS-001-2017	Other pins	±4000	V
ESD CDM	Electrostatic discharge voltage (charge device model), per ANSI/ESDA/JEDEC JS-002-2018	All pins	±1000	V

5.3 Recommended Operating Conditions

Parameter	Description	Min.	Тур.	Max.	Unit
VBAT	Battery regulator supply voltage	2.7	-	3.6	V
VCCIF	Supply voltage for IF	2.2	-	3.6	V
VCCRXFE	Supply voltage for RX	2.2	-	3.6	V
VCCPA	Supply voltage for PA	2.7	-	3.6	V
VCCTX	Supply voltage for TX	2.7	-	3.6	V
VCCPLL	Supply voltage for RF PLL	2.2	-	3.6	V

Parameter	Description	Min.	Тур.	Max.	Unit
VDDAON	Always-on/digital LDO output voltage	0.5	0.9	1.0	V
T_{OPR}	Operating temperature range	-40	-	105	\mathcal{C}

5.4 Digital I/O Characteristics

Symbol	Parameter	Conditions	Min.	Тур.	Max.	Unit
VIH	High-level input voltage	-	0.7 VBAT	-	VBAT + 0.3	V
VIL	Low-level input voltage	-	-0.3	-	0.3 VBAT	V
VOH	High-level output voltage	-	0.9 VBAT	-	-	V
VOL	Low-level output voltage	-	-	-	0.1 VBAT	V
I_{DRV}	I/O output drive strength	-	5	-	20	mA
R _{PU}	Weak pull-up resistor	-	-	48	-	kΩ
R _{PD}	Weak pull-down resistor	-	-	48	-	kΩ

5.5 Digital LDO

Parameter	Description	Min.	Тур.	Max.	Unit
VDDAON	Always-on/digital LDO output voltage	0.5	0.9	1.0	V
Load current	-	-	-	50	mA

5.6 26 MHz Crystal Characteristics

Symbol	Parameter	Conditions	Min.	Тур.	Max.	Unit
F0	Nominal frequency	-	-	26	-	MHz
ΔF/F0	Frequency tolerance	25 ℃	-10	-	+10	ppm
TC	Frequency stability over	-40 to 105 ℃ crystal	-20	-	+20	ppm
TC	operating temperature	-30 to 85 ℃ crystal	-10	-	+10	ppm
CL	Load capacitance	-	7	7.3	9	pF
TS	Trim sensitivity	-40 to 105 ℃ crystal	-	32	-	ppm/pF

Symbol	Parameter	Conditions	Min.	Тур.	Max.	Unit
		-30 to 85 ℃ crystal	-	17	-	ppm/pF

5.7 Current Consumption

Measured with T = 25 °C, VBAT = 3.0 V unless otherwise stated.

Parameter	Condition	Min.	Тур.	Max.	Unit
Active Mode		'			
	11 Mbps DSSS	-	40	-	mA
RX current	54 Mbps OFDM	-	42	-	mA
	MCS7, HT20	-	42	-	mA
	11 Mbps DSSS @ 17 dBm	-	270	-	mA
TX current	54 Mbps OFDM @ 15 dBm	-	230	-	mA
	MCS7, HT20 @ 14 dBm	-	220	-	mA
Sleep Mode		1	'	<u> </u>	<u> </u>
Normal sleep	-	-	1	-	mA
Low-voltage sleep	-	-	90	-	μΑ

5.8 WLAN Receiver RF Characteristics

Parameter	Condition	Min.	Тур.	Max.	Unit
General					
Frequency range	-	2412	-	2484	MHz
Sensitivity					
Sensitivity - IEEE 802.11b	1 Mbps DSSS	-	-99	-	dBm
(8% PER for 1024 octet PSDU)	2 Mbps DSSS	-	-96	-	dBm

Parameter	Condition		Min.	Тур.	Max.	Unit
	5.5 Mbps DSSS		-	-94	-	dBm
	11 Mbps DSSS		-	-90	-	dBm
	6 Mbps OFDM		-	-92	-	dBm
	9 Mbps OFDM		-	-92	-	dBm
	12 Mbps OFDM		-	-91	-	dBm
Sensitivity - IEEE 802.11g	18 Mbps OFDM		-	-89	-	dBm
(10% PER for 1000 octet PSDU)	24 Mbps OFDM		-	-86	-	dBm
	36 Mbps OFDM		-	-82	-	dBm
	48 Mbps OFDM		-	-78	-	dBm
	54 Mbps OFDM		-	-76	-	dBm
	MCS0		-	-92	-	dBm
	MCS1		-	-90	-	dBm
	MCS2		-	-87	-	dBm
Sensitivity - IEEE 802.11n, 20 MHz	MCS3		-	-84	-	dBm
(10% PER for 4096 octet PSDU)	MCS4		-	-81	-	dBm
	MCS5		-	-77	-	dBm
	MCS6		-	-75	-	dBm
	MCS7		-	-74	-	dBm
Maximum Receive Level						
	11b: 1, 2 Mbps (8 octets)	% PER, 1024	-	-	10	dBm
Manianan arasina laural @ 2.4 CH-	11b: 5.5, 11 Mbps octets)	(8% PER, 1024	-	-	10	dBm
Maximum receive level @ 2.4 GHz	11g: 6–54 Mbps (octets)	10% PER, 1000	-	-	5	dBm
	11n: MCS0-7 (10% PER, 4096 octets)		-	-	2	dBm
Adjacent Channel Rejection	1		I	I	1	I
Adjacent channel (±30 MHz) rejection - IEEE 802.11b	1 Mbps DSSS	-74 dBm	-	51	-	dB

Parameter	Condition		Min.	Тур.	Max.	Unit
(8% PER for 1024 octet PSDU with desired signal level as specified in Condition)	2 Mbps DSSS	-74 dBm	-	48	-	dB
Adjacent channel (±25 MHz) rejection - IEEE 802.11b	5.5 Mbps DSSS	-70 dBm	-	42	-	dB
(8% PER for 1024 octet PSDU with desired signal level as specified in Condition)	11 Mbps DSSS	-70 dBm	-	37	-	dB
Adjacent channel (±25 MHz) rejection - IEEE 802.11g	6 Mbps OFDM	-79 dBm	-	42	-	dB
(10% PER for 1000 octet PSDU with desired signal level as specified in Condition)	54 Mbps OFDM	-62 dBm	-	30	-	dB
Adjacent channel (±25 MHz) rejection - IEEE 802.11n	MCS0	-79 dBm	-	42	-	dB
(10% PER for 4096 octet PSDU with desired signal level as specified in Condition)	MCS7	-61 dBm	-	24	-	dB
Spurious Emissions						
Spurious amissions	< 1 GHz		-	-	-60	dBm
Spurious emissions	> 1 GHz		-	-	-60	dBm

5.9 WLAN Transmitter RF Characteristics

Parameter	Condition	Min.	Тур.	Max.	Unit
General					
Frequency range	-	2412	-	2484	MHz
TX power			·		·
TX power - IEEE 802.11b	1 Mbps DSSS	-	19	-	dBm
(SEM compliant)	11 Mbps DSSS	-	19	-	dBm
TX power - IEEE 802.11g	6 Mbps OFDM	-	20	-	dBm
(EVM compliant)	54 Mbps OFDM	-	17	-	dBm
TX power - IEEE 802.11n	MCS0	-	19	-	dBm

Parameter	Condition		Min.	Тур.	Max.	Unit
(EVM compliant)	MCS7		-	16	-	dBm
Harmonic Level						1
Harmonic level (at maximum output power)	4.8–5.0 GHz	2nd harmonic	-	-	-45	dBm
	7.2–7.5 GHz	3rd harmonic	-	-	-50	dBm
Spurious Emissions						
Spurious emissions (at maximum output power)	< 1 GHz		-	-	-50	dBm
	> 1 GHz		-	-	-43	dBm

7. Reflow Soldering Profile

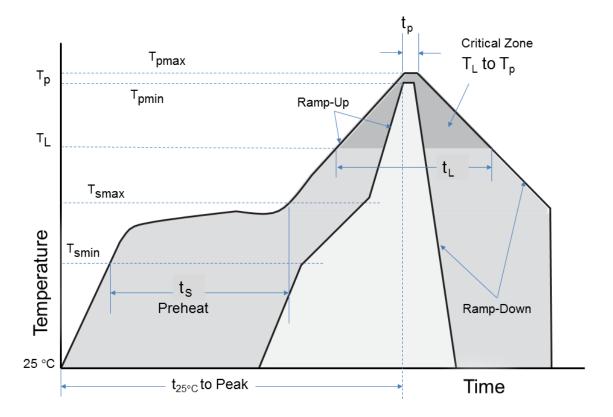

Figure 7-1 Reflow Soldering Profile

Profile Feature		Specification
Average ramp-up rate $(T_{smax} \text{ to } T_p)$		3 °C/s max.
	Temperature min. (T _{smin})	150 ℃
Preheat	Temperature max. (T _{smax})	200 ℃
	Time (t _s)	60 s to 180 s
Time maintained above	Temperature (T _L)	217 ℃
Time maintained above	Time (t_L)	60 s to 150 s
Peak/classification temperature (T _p)		260 ℃
Time within 5 $^{\circ}$ C of actual peak temperature (t_p)		20 s to 40 s

Profile Feature	Specification	
Ramp-down rate	6 ℃/s max.	
Time 25 ℃ to peak temperature	8 minutes max.	

RoHS Compliant

The product does not contain lead, mercury, cadmium, hexavalent chromium, PBB, PBDE, DEHP, BBP, DBP, or DIBP content in accordance with EU RoHS Directive (EU) 2015/863 amending Annex II to Directive 2011/65/EU.

ESD Sensitivity

Integrated circuits are ESD sensitive and can be damaged by static electricity. Proper ESD techniques should be used when handling these devices.

Moisture Sensitivity Level

The product is qualified to moisture sensitivity level MSL3 in accordance with IPC/JEDEC J-STD-020.

8. Ordering Information

BKxxxx P N/H or P xx m

Flash size (2^m MB)

Pin number

Ambient temperature or package code 2 if no SiP Flash
N: Normal temperature (~85 °C)
H: High temperature (~105 °C)

Package code 1

Series/Family

Figure 8-1 Part Number Scheme

Table 8-1 Ordering Information

Ordering Code	Package	SiP ^a Flash	Ambient Temp	Packing	Minimum Ordering Qty (MOQ)
BK7238QH321	4 mm x 4 mm QFN32	2 MB	-40 to +105 ℃	Tape and Reel	3000
BK7238QH201	3 mm x 3 mm QFN20	2 MB	-40 to +105 ℃	Tape and Reel	6000

a. A system in a package (SiP) refers to Flash enclosed in the package.

Revision History

Version	Date	Description	
0.1	2021/11/2	Initial release. First version of the preliminary specification.	
0.2	2022/2/18	 Added documentation for QFN32 package and general wording update: Added and updated features in Section 1 Features Updated Figure 2-1 and added Table 2-1 in Section 2 Overview Added Section 3.1 QFN32 Pin Description Changed the pin name of pin 7 in Section 3.2 QFN20 Pin Description Added deep sleep mode to Section 4.2.1 Power Modes Added clock selection for SPI, I2C to Table 4-2 in Section 4.3 Clock Updated Section 4.4 Reset Updated GPIO number in Section 4.5 General-purpose I/Os (GPIO Added Section 4.6 SPI Interface (SPI), Section 4.8 I2C Interface (I2C), Section 4.9 GDMA Controller (GDMA) Updated PWM channel number in Section 4.10 PWM Updated Section 4.11 Auxiliary ADC (AUX ADC) Changed parameter VDDDIG to VDDAON in Section 5.3 Recommended Operating Conditions Added deep sleep current to Section 5.7 Current Consumption Added Section 6.1 QFN32 4 x 4 mm Package Added QFN32 ordering information to Table 8-1 in Section 8 Ordering Information 	
0.3	2022/7/7	 Corrected RAM size and removed Cache in Section 1 Features Removed Cache from Figure 2-1 in Section 2 Overview Added documentation for QFN40 package Updated Operating temperature Corrected IO mapping for ADC channels in Section 3 Pin Description Added measurement conditions for RF characteristics and SAR ADC characteristics in Section 5 Electrical Characteristics Added Section 7 Reflow Soldering Profile 	
1.0	2022/10/24	 Updated Wi-Fi TX power and RX sensitivity in Section 1 Features Added 2 MB Flash option for QFN32 and QFN20 packages Replaced low-power timer with real-time counter (RTC) Added Section 5.2 ESD Ratings Added active mode TX current and deep sleep current to Section 5.7 	

Version	Date	Description
		Current Consumption
		• Updated and added RF data in Section 5.8 to Section 5.11
		Updated SAR ADC characteristics table in Section 5.12 AUX ADC Characteristics
		Updated Table 2-1 for BK7238QN20 in Section 2 Overview
1.1	2023/2/20	• Updated pin assignments of QFN20 package (BK7238QN20)
1.1		Updated storage temperature range in Section 5.1 Absolute Maximum Ratings
1.2	2023/3/6	Added Section 4.2.2 Power-up Sequence
1.3	2023/3/31	Updated Section 8 Ordering Information
1.4	2023/4/28	Updated ESD ratings in Section 5.2 ESD Ratings
		General wording update
		Removed PTA support from Section 1 Features
		Renamed standby mode as sleep mode and SAR ADC as AUX ADC
		Corrected CLK13M signal description in Section 3 Pin Description
		Updated wording for Section 4 Functional Description
		• Renamed Section Modes of Operation as Section 4.2.1 Power Modes
1.5	2023/8/10	 Organized Section 4.2.1 Power Modes and Section 4.2.2 Power-up Sequence as subsections under Section 4.2 Power Management
		 Removed note "Values currently listed in this section are preliminary measurements and are subject to change." from Section 5 Electrical Characteristics
		 Updated and added measurement data in Section 5 Electrical Characteristics
		 Updated minimum ordering quantity for QFN20 package in Section 8 Ordering Information
1.6	2023/11/7	Updated minimum recommended operating voltages for VCCIF, VCCRXFE, and VCCPLL in Section 5.3 Recommended Operating Conditions
		Corrected GPIO number in QFN40 package in Section 1 Features
1.7	2023/11/24	• Updated RoHS compliance statement in Section 7 Reflow Soldering Profile
1.8	2023/12/1	Revised 802.11 compliance to 802.11b/g/n in Section 2 Overview
1.9		Updated Wi-Fi operating mode support and current consumption in Section 1 Features
	2024/3/28	Updated SiP Flash size
		Removed QFN40 package

Version	Date	Description
		Update the description of Section 4.4 Reset
		Updated current consumption in Section 5.7 Current Consumption
		 Updated ordering information in Table 8-1 in Section 8 Ordering Information
